

FIB-SOL Knowledge Base

This document consolidates all available company, product, technology, manufacturing, performance, and service information for FIB-SOL Life Technologies. The content is structured specifically for Retrieval-Augmented Generation (RAG) systems and AI assistants.

Company Information

- Company Name: FIB-SOL Life Technologies
 - Address: 4/296, Kamarajar Street, OMR Perungudi, Kottivakkam, Chennai - 600096
 - Phone: +91 9444718068
 - Website: www.fibsol.com
-

Awards & Recognition

- National Bio-entrepreneurship Award – December 2017
 - Uzhave Thalai Awardee – 2017
 - SG Award, Future Food Asia – May 2018
 - Swissnex Lift Labs Liftathon – December 2016
 - Cavinkare-MMA Chinnikrishnan Award – 2017
 - Open Innovation Challenge of IIGP 2.0 – 2017
 - Sir JC Bose Patent Award – July 2017
-

Products & Services

- FIB-SOL positions itself as an ultimate bio-input manufacturer.
 - Provides crop nutrition products, crop protection products, and special formulations.
 - Supports marketing companies with advanced microbial solutions.
 - Offers agile manufacturing capability with flexible MOQ support.
 - Provides custom microbial compositions for specific agricultural outcomes.
 - Helps companies diversify portfolios without additional R&D; investments.
-

IG4 Technology

- Indian Patent Number: 421141
- Novel gel-based formulation technology.

- Industry-leading microbial payload capacity of 10^{11} to 10^{13} CFU.
 - Zero contamination.
 - 18 months multi-season stability.
 - 100% water solubility.
 - 10x smaller logistics footprint.
 - Enables flexible microbial counts and compositions.
-

Performance & Outcomes

- Products cumulatively reached 6,00,000 acres since 2020.
 - Reliable field outcomes across multiple crops.
 - 10–25% yield boost observed across key crops.
 - FY 2025-26 sales: 1.85 lakh units sold.
 - Nominal yield increase achieved even with only 75% of recommended fertilizer dosage.
-

Logistics & Storage Advantages

- 100ml SKU equivalent to 1 litre competitor liquid biofertilizer products.
 - 10x lesser product volume and weight.
 - 5x lower shelf and storage space requirements.
 - Reduced logistics overheads.
 - Reduced product return risks.
-

Shelf Life & Stability

- Microbial encapsulation keeps microbes dormant and viable for nearly 24 months.
 - Claimed shelf life spans 18 months across 3 crop seasons.
 - Stable even under higher-temperature storage conditions.
-

Farmer Application Methods

- Seed dressing
- Soil drench
- Drip irrigation
- Broadcasting
- Foliar spray

Soil Health Benefits

- Microbes improve soil aggregation.
 - Enhances nutrient recycling.
 - Improves water retention properties.
 - Supports soil structure retention.
 - Helps resist drought conditions.
 - Microbes degrade soil carbon macromolecules into food for beneficial soil fauna.
-

Crop & Stage Specific Formulations

- FIB-SOL provides crop-specific and crop-stage-specific microbial formulations.
 - Formulations are designed to improve yield and crop quality outcomes.
 - Supports integrated nutrient management practices.
 - Supports integrated pest management practices.
-

Manufacturing Capability

- World's only gel-based microbial formulation manufacturer.
 - Agile manufacturing enabled through IG4 Technology and process IP.
 - Flexible manufacturing support for different microbial compositions.
 - Strong vendor relationships ensure timely delivery.
-

Technical & R&D; Support

- Dedicated R&D-heavy; team with 10 members.
 - 4 scientists including 3 PhDs from IIT Madras and 1 PhD from Madras University.
 - Team includes biotechnologists, biochemists, and chemists.
 - Strong academic collaboration network with top institutions.
-

Business Benefits For Marketing Companies

- Quickly add advanced microbials to portfolio without R&D; investments.
- Transition portfolio toward sustainability.

- Extract premium margins of 15–20%.
 - Flexible MOQ and turnaround time.
 - Quick technical support.
 - Reduced logistics and storage overheads.
 - Reliable yield and quality improvements.
-

This structured knowledge base is optimized for AI retrieval systems, chatbot applications, semantic search pipelines, and Retrieval-Augmented Generation (RAG) workflows.
